

The more things change

heselsvomberg.de

... the more they stay the same.

Industrial production of steel tubes dates back to the groundbreaking invention of the Mannesmann Brothers in the late 19th century. Just a short while later Mannesmann became known and respected for its quality all over the world, especially in the oil and gas sector.

We are proud to announce that we have gone back to our naming roots and will once again feature our founders prominently in the company name: **We are Mannesmann Stainless Tubes.**
