Today, in the 21st century, the future is about to be changed once more – by the CERN particle accelerator. We equipped this world-renowned project with stainless steel and nickel alloy tubes, which remain the industry benchmark.

The industrial production of steel tubes dates back to the ground-breaking invention of the Mannesmann Brothers in the late 19th century. Just a short while later Mannesmann became known and respected for its quality throughout the world.

Today, in the 21st century, the future is about to be changed once more – by the CERN particle accelerator. We equipped this world-renowned project with stainless steel and nickel alloy tubes, which remain the industry benchmark.

Mannesmann Stainless Tubes. Quality to make history.
